## PHASE 1

Summary of the PICES/NPRB Workshop on *Forecasting Climate Impacts on Future Production of Commercially Exploited Fish and Shellfish* (July 19–20, 2007, Seattle, U.S.A.)

Background .....	3
Links to Other Programs .....	4
Workshop Format.....	4
Session I. Status of climate change scenarios in the PICES region .....	4
Session II. What are the expected impacts of climate change on regional oceanography and what are some scenarios for these drivers for the next 10 years?.....	5
Session III. Recruitment forecasting .....	5
Session IV. What models are out there? How is climate linked to the model? .....	8
Session V. Assumptions regarding future fishing scenarios and enhancement activities .....	9
Session VI. Where do we go from here? .....	11
References.....	12
Appendix 1.1 List of Participants.....	13

## PHASE 2

Summary of the PICES/NPRB Workshop on *Forecasting Climate Impacts on Future Production of Commercially Exploited Fish and Shellfish* (October 30, 2007, Victoria, Canada)

Background .....	19
Workshop Agenda.....	19
Forecast Feasibility .....	19
Format of Information.....	19
Modeling Approaches .....	20
Coupled bio-physical models.....	20
Stock assessment projection models .....	20
Comparative approaches.....	20
Similarities in Data Requests .....	20
Opportunities for Coordination with Other PICES Groups and International Efforts.....	21

## BACKGROUND REPORTS PREPARED FOR THE PHASE 2 WORKSHOP

Northern California Current (U.S.) groundfish production by <i>Melissa Haltuch</i> .....	33
Changes in sablefish ( <i>Anoplopoma fimbria</i> ) recruitment in relation to oceanographic conditions by <i>Michael J. Schirripa</i> .....	35
Northern California Current (British Columbia) Pacific cod ( <i>Gadus macrocephalus</i> ) production by <i>Caihong Fu and Richard Beamish</i> .....	37
Northern California Current (British Columbia) sablefish ( <i>Anoplopoma fimbria</i> ) production by <i>Richard Beamish</i> .....	41
Northern California Current (British Columbia) pink ( <i>Oncorhynchus gorbuscha</i> ) and chum ( <i>O. keta</i> ) salmon production by <i>Richard Beamish</i> .....	45
Northern California Current (British Columbia) ocean shrimp ( <i>Pandalus jordani</i> ) production by <i>Caihong Fu</i> .....	51
Alaska salmon production by <i>Anne Hollowed</i> .....	51

U.S. walleye pollock ( <i>Theragra chalcogramma</i> ) production in the eastern Bering Sea and Gulf of Alaska by Kevin Bailey and Anne Hollowed .....	53
U.S. groundfish production in the eastern Bering Sea by Tom Wilderbuer.....	57
U.S. crab production in the eastern Bering Sea by Gordon H. Kruse .....	59
Forecasting Japanese commercially exploited species by Shin-ichi Ito, Kazuaki Tadokoro and Yasuhiro Yamanka .....	63
Russian fish production in the Japan/East Sea by Yury Zuenko, Vladimir Nuzhdin and Natalia Dolganova .....	65
Chum salmon ( <i>Oncorhynchus keta</i> ) production in Korea by Sukyung Kang, Suam Kim and Hyunju Seo.....	69
Jack mackerel ( <i>Trachurus japonicus</i> ) production in Korea by Jae Bong Lee and Chang-Ik Zhang .....	73
Chub mackerel ( <i>Scomber japonicus</i> ) production in Korea by Jae Bong Lee, Sukyung Kang, Suam Kim, Chang-Ik Zhang and Jin Yeong Kim .....	77
References .....	81
Appendix 2.1 List of Participants.....	87

### PHASE 3

Summary of the PICES Workshop on <i>Linking Global Climate Model Output to (a) Trends in Commercial Species Productivity and (b) Changes in Broader Biological Communities in the World's Oceans</i> (May 18, 2008, Gijón, Spain) .....	93
Appendix 3.1 List of Participants.....	97
Appendix 3.2 Workshop Agenda .....	101

## Foreword

The recent publication of the Intergovernmental Panel on Climate Change (IPCC) 4th Assessment Report (AR4) concludes that there is a growing body of evidence that indicates climatic conditions are likely to change due to natural and anthropogenic forcing. In response to these findings the PICES scientific community initiated a series of meetings to:

- a) discuss frameworks and methodologies for forecasting the impacts of climate change on the growth, distribution and abundance of marine life, with particular emphasis on commercial fish and shellfish;
- b) review the results of designated case studies to test methods;
- c) plan for an inter-sessional meeting in early 2010 where scientists can present, discuss and publish forecasts of climate change impacts on the world's commercial fish and shellfish resources.

The research done within PICES on climate change and fisheries has been diverse and has included:

- guidance on methods for selection of IPCC scenarios for use in projections,
- guidance on techniques for downscaling IPCC scenarios to local regions,
- development of coupled ecosystem models for use in evaluating climate-induced shifts in environmental conditions,
- numerous publications documenting relationships between climate forcing and marine fish and shellfish distribution and production, and
- stock assessment techniques for evaluating management strategies to mitigate the impacts of change.

A challenge facing PICES is the need to integrate this research to provide stakeholders with quantitative estimates of the potential impact of climate change on marine life in the North Pacific. This challenge calls for the establishment of interdisciplinary research teams composed of experts from around the Pacific Rim who will focus attention on the development of common and standardized frameworks for forecasting climate change impacts on marine life, with particular emphasis on commercially important fish and shellfish. The Science Plan for the new PICES scientific program, FUTURE (Forecasting and Understanding Trends, Uncertainty and Responses of North Pacific Marine Ecosystems), also highlights the need for integrated interdisciplinary research on the potential implications of climate change on marine ecosystems. PICES should act now to ensure that our research communities develop the capability to provide quantitative contributions to the next IPCC reports and guidance for management under climate change scenarios. PICES should strive to present and discuss results of the forecasting teams at an inter-sessional meeting, and papers should be published in a peer reviewed journal by 2011. The timing for the publication is critical because the future IPCC AR5 report is slated for release in 2013, and only published papers can be referenced in that report.

## **Acknowledgements**

The following scientists provided written summaries for this report: Kevin Bailey, Richard Beamish, Natalia Dolganova, Caihong Fu, Melissa Halutch, Anne Hollowed, Shin-ichi Ito, Sukyung Kang, Jin Yeong Kim, Suam Kim, Gordon Kruse, Jae Bong Lee, Nathan Mantua, Vladimir Nuzhdin, Thomas Okey, James Overland, Michael Schirripa, Hyunju Seo, Kazuaki Tadokoro, Thomas Wilderbuer, Yasuhiro Yamanaka, Chang-Ik Zhang, and Yury Zuenko. The editors would like to thank all of these individuals for their efforts in preparing this report. The editors thank PICES and the North Pacific Research Board for providing the funding for the first two workshops, held in Seattle, U.S.A. and Victoria, Canada.
